

## 2020 Fall EECS205002 Linear Algebra

### 2020/12/2 Quiz 3

1. (50%) Multiple choice questions. Each question may have 0, 1, or more correct choices. For each question, you need to choose all the correct items to get the credit.
  - (a) If the vectors  $v_1, v_2, \dots, v_n$  form a basis for a vector space  $V$ , which statements are true?
    - A.  $v_1, v_2, \dots, v_n$  are linearly independent.
    - B. Any vector in  $V$  can be expressed as a unique linear combination of  $v_1, v_2, \dots, v_n$ .
    - C. The dimension of  $V$  is  $n$ .
    - D. Any  $m$  vectors in  $V$ ,  $m > n$  cannot be linearly independent.
    - E. Any  $m$  vectors in  $V$ ,  $m > n$  can span  $V$ .
  - (b) If  $V$  is a vector space of dimension  $n > 0$ , which statements are true?
    - A. Any set of  $n$  linearly independent vectors spans  $V$ .
    - B. Any  $n$  vectors that span  $V$  forms a basis for  $V$ .
    - C. No set of fewer than  $n$  vectors can span  $V$ .
    - D. Any subset of fewer than  $n$  linearly independent vectors cannot be a basis for  $V$ .
    - E. Any spanning set containing more than  $n$  vectors can form a basis for  $V$ .
  - (c) Which statements are true?
    - A. The rank of a matrix  $A$  is the dimension of  $A$ 's row space.
    - B. The dimension of  $A$ 's row space equals to the dimension of  $A$ 's column space.
    - C. The row space of a matrix  $A$  is the space spanned by  $A$ 's row vectors; the column space of a matrix  $A$  is the space spanned by  $A$ 's column vectors;

D. For an  $m \times n$  matrix, the rank of  $A$  plus the nullity of  $A^T$  equals to  $m$ .

E. The nullity of  $A$  is the dimension of  $A$ 's null space.

(d) Let  $U$  be a reduced row echelon form of a matrix  $A$ , which of the following statements are true?

A.  $U$  has the same row space as  $A$ .

B. The rank of  $U$  is the same as  $A$ 's rank.

C. The column space of  $U$  is the same as the column space of  $A$ .

D. The column vectors of  $U$  that contains leading variables are linearly independent.

E. The column vectors of  $A$  that corresponds to the column vectors of  $U$  containing leading variables form a basis of  $A$ 's column space.

(e) For an  $m \times n$  matrix  $A$ , which of the statements are true?

A. A linear system  $Ax = b$  is consistent if and only if  $b$  is in the column space of  $A$ .

B. The linear system  $Ax = b$  is consistent for every  $b \in \mathbb{R}^m$  if and only if the column vectors of  $A$  are linearly independent.

C. The system  $Ax = b$  has at most one solution for every  $b \in \mathbb{R}^m$  if and only if the column vectors of  $A$  span  $\mathbb{R}^m$ .

D. For  $m = n$ , matrix  $A$  is nonsingular if and only if the row vectors of  $A$  form a basis for  $\mathbb{R}^n$ .

E. The linear system  $Ax = b$  has a unique solution for every  $b \in \mathbb{R}^m$  if and only if  $A$  is nonsingular.

(f) An  $m \times n$  matrix  $A$  has a right inverse if there exists an  $n \times m$  matrix  $C$  such that  $AC = I_m$ . The matrix  $A$  is said to have a left inverse if there exists an  $n \times m$  matrix  $D$  such that  $DA = I_n$ . Based on the above definition, which of the statements are true?

A. If  $A$  has a right inverse, then the column vectors of  $A$  span  $\mathbb{R}^m$ .

B. If  $A$  has a right inverse, then  $n \geq m$ .

C. If  $A^T$  has a left inverse, then  $A$  has a right inverse.

D. If  $A$  has a left inverse then the columns of  $A$  are linearly independent.

E. If  $A$  has both left inverse and right inverse,  $A$  must be nonsingular.

- (g) Which of the statements are true?
- A.  $\vec{x}^T \vec{y} = \|\vec{y}\| \|\vec{x}\| \cos(\theta)$ , where  $\theta$  is the angle between  $\vec{x}$  and  $\vec{y}$ .
  - B. Two vectors are orthogonal if their scalar product equals to 0.
  - C. The projection matrix of  $\vec{x}$  is  $\frac{\vec{x}\vec{x}^T}{\vec{x}^T \vec{x}}$ .
  - D. The normal vector of a plane  $ax+by+cz+d=0$  is  $[a-d, b-d, c-d]^T$ .
  - E. Let  $\vec{x}$  and  $\vec{y}$  be two vectors in  $\mathbb{R}^n$ .  $\|\vec{x}\| + \|\vec{y}\| \leq \|\vec{x} + \vec{y}\|$ .
- (h) For a linear least square problem  $\min_{\vec{x}} \|A\vec{x} - \vec{b}\|$ , which of the statements are true?
- A. The problem is equivalent to find a vector in  $A$ 's row space whose distance to  $\vec{b}$  is minimum.
  - B. For an  $m \times n$  matrix  $A$ ,  $A^T A$  is nonsingular if and only if  $A$  has rank  $n$ .
  - C. The optimal solution must be orthogonal to  $A$ 's column vectors.
  - D. The solution of this problem must satisfy the normal equation:  $A^T A\vec{x} = A^T \vec{b}$ .
  - E. The linear system  $A^T A\vec{x} = A^T \vec{b}$  has no solution if  $A^T A$  is singular.
- (i) For any pair of vectors  $x, y$  in a vector space  $V$ , and  $\langle x, y \rangle$  is an inner product operation, which of the statements are true?
- A.  $\langle x, y \rangle$  is a real number.
  - B.  $\langle x, x \rangle$  is a positive number.
  - C.  $\langle x, x \rangle = 0$  if and only if  $x = 0$ .
  - D.  $\langle x, y \rangle = \langle y, x \rangle$ .
  - E.  $\langle (\alpha + \beta)x, y \rangle = \alpha \langle x, y \rangle + \beta \langle x, y \rangle$  for  $\alpha, \beta \in \mathbb{R}^n$ .
- (j) If  $v \neq 0$  and  $p$  is the vector projection of  $u$  onto  $v$ .
- A.  $p = \frac{\langle u, v \rangle}{\langle v, v \rangle} v$ .
  - B.  $v - p$  and  $p$  are orthogonal.
  - C.  $p$  is a scalar multiple of  $v$ .
  - D.  $p = u$  is  $u$  is a scalar multiple of  $v$ .
  - E. The length of  $p$  is  $\frac{\langle u, v \rangle}{\|v\|}$ .

2. (10%) Find a subset from the following vectors to form a basis for  $\mathbb{R}^3$ .

$$\vec{x}_1 = \begin{bmatrix} 1 \\ 2 \\ 2 \end{bmatrix}, \vec{x}_2 = \begin{bmatrix} 2 \\ 5 \\ 4 \end{bmatrix}, \vec{x}_3 = \begin{bmatrix} 1 \\ 3 \\ 2 \end{bmatrix}, \vec{x}_4 = \begin{bmatrix} 2 \\ 7 \\ 4 \end{bmatrix}, \vec{x}_5 = \begin{bmatrix} 1 \\ 1 \\ 0 \end{bmatrix}.$$

3. (10%) Find the point on the line  $y = 2x + 4$  that is closest to the point  $(5, 2)$ .

4. (10%) There are four points  $(0, 3), (1, 2), (2, 4), (3, 4)$ . Find a line  $y = ax + b$  so that the summation of their squared distance to the line is minimum, as requested below.

$$\min_{a,b} \sum_{i=1}^4 (y_i - (ax_i + b))^2$$

5. (10%) Show that if  $U$  and  $V$  are subspaces of  $\mathbb{R}^n$ , then  $\dim(U + V) \leq \dim(U) + \dim(V)$  where

$$U + V = \{\vec{z} | \vec{z} = \vec{u} + \vec{v} \text{ where } \vec{u} \in U \text{ and } \vec{v} \in V\}.$$

6. (10%) Show the distance of a point  $(x_i, y_i)$  to the line  $ax + by + c = 0$  is  $|ax_i + by_i + c|$  where  $a^2 + b^2 = 1$ .
